Indexed universal life is a permanent insurance product with a duration and death benefit. An IUL policy allows for cash value accumulation but is not subject to market exposure. In many cases the indexed universal life products (IULs) will have caps and floors which limit both the volatility of any cash values and the upside potential. Refer to the product guide for more information including any applicable riders and fees, and sales or surrender charges.

It is possible coverage will expire when either no premiums are paid following the initial premium, or subsequent premiums are insufficient to continue coverage.
